-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☐ Responsive to communication(s) filed on \_\_\_\_.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

## **DETAILED ACTION**

### ***Drawings***

1. The drawings are objected to because:

Box 60 (e.g. fig. 3, 4) should be labeled: -- Processing Circuitry --

Box 697 (e.g. fig. 9) should be labeled: --Switch --

Box 699 should be labeled: -- Control Logic --

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 2, 5-8, 10, 11, 14-17, 19 are rejected under 35 U.S.C. 102(b) as being anticipated by Douglas et al. (6,411,108).

Regarding claims 1, 5, 7, 10, 14-17, 19, Douglas et al. discloses a sensor comprise (figure 5) a first signal sensor including a local ground connection (95); an input (84) and an output (100); processing circuitry (include elements 104, 116 and 66) including an input (At element 100) connected to said output (100) of the first signal sensor and the local ground connection (96); a ground sensor (70) including a first electrode (78); a second electrode (74), whereby a voltage (at node 96) of the local ground connection of the first signal sensor (76) is forced to be substantially the same as a voltage presented by the object (Electrode 76 directly connected to node (96), it is the same voltage) at said ground sensor so as to reduce an effect of a change in static potential on the signal of interest (Column 7, lines 10-21).

Regarding claims 2, 8, 11, Douglas discloses a capacitive type electrode (68, 70) and an amplifier (88, 86) with a DC supply (V+) wherein the input is connected to capacitive type electrode.

Regarding claim 6, Douglas discloses a capacitor (130) electrically disposed between the electrode and the high impedance amplifier (134).

***Allowable Subject Matter***

4. Claims 3, 4, 9, 12, 13, 18, 20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
